REASONS FOR ALLOWANCE

The applicant's response filed 8/29/05 to the Office action has been entered. Claims 1-4, 7-8, 39 and 42-43.

1. The following is an examiner's statement of reasons for allowance:

Concerning claims 1-4, 7-8, 39, 42-43, no prior art has been found teaching or suggesting a method of analyzing a target nucleic acid by applying the primer which has lower amount than another primer and is labeled comprising determining a number of cycles of the nucleic acid amplification reaction until the labeled primer has been consumed and quantifying an initial amount of the target nucleic acid on the basis of the cycles of the nucleic acid amplification reaction.

The closest prior art is the references of Salituro et al., Eigen et al. and McCabe. Salituro et al. disclose a method of detecting a target sequence involving a labeled primer, which has lower concentration than another primer, Eigen et al. disclose fluorescence correlation spectroscopy (FCS) and advantage of using the technique in PCR method and McCabe discloses an asymmetric PCR in which during an initial 15-25 cycles, double stranded DNA is generated and as the low concentration primer becomes depleted, further cycles generate an excess of one of the two strand. However, the combination of the references does not render the instant invention because there is no motivation to quantify an initial amount of the target nucleic acid on the basis of cycles of the nucleic acid amplification reaction as the labeled lower amount of the primer is consumed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
